

## Foreign Language Capabilities [continued]

Converting files to database records for in-house systems is also possible, but is dependant on the retrieval capabilities of the system. TechLaw Solutions can also apply its Optical Character Recognition (OCR) technology to enable full-text searching of image-based foreign language documents.

With TechLaw Solution's workflow and technology clients have the option of adding a foreign language tier to the eDiscovery processing cycle.

### Review and Hosting

Many commonly used review platforms are not Unicode compliant and do not accommodate multiple foreign languages. TechLaw Solution's hosting and review application, powered by CaseLogistix, is fully Unicode compliant supporting over 250 languages and is highlighted by the following capabilities.

- › Simultaneous searching of multi-language collections regardless of character type.
- › Full-text searching and keyword highlighting of search terms in the foreign text.
- › Comprehensive review and tagging capabilities, such as privilege designations, in foreign languages.
- › Annotate electronic document images in non-English character sets, including Arabic, Chinese, Cyrillic, Greek, Hebrew, Japanese, Korean, Latin, Thai and Turkish.
- › Effective rules-based review process with a foreign language workflow tier customized by our experienced Project managers. This is built around the needs of review teams to have documents grouped together and automatically flow to specific lingual reviewers.

Full-text searching of foreign language data gives legal teams the ability to make a relevancy and production determination faster and without the time and cost of translations. Simultaneous searching avoids the need for separate searches and the complicated consolidation of search results. Highlighted search terms simplify the process of viewing, indexing and annotating your results. Customization provides additional time and cost savings in conjunction with multi-lingual legal teams that may include contract staff to perform reviews in the language in which the documents exist.

We continuously gather feedback and directly enhance our hosting solution to meet market needs. Additional information on the features and benefits of TechLaw Solution's review application is available and demonstrations can easily be arranged.

### Summary

The number of lawyers and cases involved in foreign language matters continues to increase. As litigation and other activity regularly crosses international borders, TechLaw Solutions can help manage the added complexity of multiple languages as you work through the entire eDiscovery process. We will continue to proactively provide clients with solutions that offer best practice strategies.
