

TechLaw Solutions Launches Fully Redundant Backup Data Hosting Center

Washington DC – February 2, 2010 – TechLaw Solutions, Inc., a leading electronic discovery consulting and services provider, has brought a secondary data center online to ensure that clients are fully operational in the event of an outage or failure at the primary Tier 3 Data Hosting Center.

“It is critical as a Relativity Premium Hosting Partner to ensure that our client’s data remains absolutely protected,” said Mel Goldenberg, President of TechLaw Solutions, Inc. “In addition to data replication, internal and external penetration tests are regularly conducted to make certain that TechLaw Solutions security protocols are up to the highest standards. Risk mitigation is one of the biggest concerns voiced today, and these tests regularly confirm the integrity of our hosting services.”

TechLaw Solutions maintains Relativity at its primary Tier 3 Data Hosting Center which has a number of technical advantages. Multi-site data replication ensures data is maintained in the event of a system failure or disaster circumstances. Data can be readily brought on-line in an alternate site minimizing interruption to an active review process. Multiple power backups and redundant network connectivity provide assurance that data remains accessible in the event of hardware failure or other situations of adversity. High-end fiber connectivity and enterprise class Compellent Storage Area Network hardware provide superior access for users coming in to the data center. All these elements combined result in a superior environment and therefore an enhanced user experience.

“Having a sound and redundant technical infrastructure is one of the keys to providing a successful Relativity offering,” said Andrew Sieja, President and CEO of kCura Corporation. “We’re encouraged to see how TechLaw Solutions has built out their hosting environment.” Using Relativity, TechLaw Solutions provides image and native file review, concept analytics and clustering, diverse coding options, flexible workflow capabilities, Unicode and foreign language support, all delivered in a highly scalable, enterprise-grade solution.
